Overview AutoCAD is a desktop 2D CAD software application. There are two types of users for AutoCAD: An AutoCAD expert, who is familiar with the software but also has the proficiency to interpret, translate, and translate between data formats. Users familiar with 2D drafting who wish to produce professional-looking

drawings. There are three main tools available in AutoCAD: The pencil or vector tool: provides general drawing capabilities and supports a variety of drawing techniques. The drafting tool: provides the ability to edit and add construction geometry to a drawing and to use the drafting features of AutoCAD, such as 3D modeling and viewport shading. The documentation

tool: provides the ability to create and edit print-ready drawings, and to access drawings or templates that can be used for drafting.

Architecture is an

independent application

developed by its parent

company Autodesk as an

alternative to AutoCAD that

is available in both closed-

and open-source versions. It includes such features as advanced 2D and 3D modeling and design tools, rendering, and file management. AutoCAD Architecture is compatible with AutoCAD and is built upon AutoCAD's rendering engine. Therefore, the whole software application can be installed as a single package. It is compatible with the following operating systems: Microsoft

Unfortunately our cats have the same sense of humor. You should be careful not to make fun of them as you can make fun of yourself which is much

worse. My cat's name is Spirit. He's an orange tabby and weighs about 10 pounds. He likes to follow me around. He's a nice cat. He meows at me every once in awhile but I can tell he's sad or something. We are an ideal family. I can't say I like him more than my husband or children, but he's one of my favorites. I wish I could take him everywhere I went.

UNDATED – Scientists say
that a new superbug is
making people sick.

Legionella bacteria are
microorganisms that can
live in soil, water and air.

They are found in several
types of water systems that
are used by humans, such as
cooling towers, hot tubs,

swimming pools, water fountains, spas, whirlpools and drinking water systems. Legionella bacteria are found in water systems and may cause symptoms in people such as fever, coughing, difficulty breathing, and muscle aches. Symptoms usually occur a few weeks after exposure to the bacteria. Scientists from the U.S. Geological Survey and the Centers for Disease Control and Prevention say

that they have discovered that a new superbug is moving across the country. Officials say that the bacteria – called Legionella pneumophila – are found in the Midwest and Southwest. Officials warn that people with chronic health problems may be at risk of serious health problems if they contract the disease. People with chronic lung disease, lung cancer, or those who are

immunocompromised are the most vulnerable. Officials say that the bacteria is moving toward the Southwest, and it could be spreading as it gets wetter. Legionella can be treated with antibiotics
