Metadata in AutoCAD A number of new features were announced for 2009 by Autodesk. Multi-User Editing Multi-User Mode (MUM) allows multiple people to work simultaneously on one drawing, making it possible for each to create parts and have them be linked together with other objects. This approach is similar to collaborative editing tools such as Microsoft Office's OneNote or Google's Google Docs. Routine Drawing Automation The Routine Drawing Automation feature allows users to store the commands for common drawing tasks in a database. Users can then search and execute these commands, without having to manually retype every command. Geographic Information System (GIS) With the introduction of the 2006 release of AutoCAD Architecture, a new "quick task" button was added to the toolbar of the editing toolbars. This new function would allow a user to perform common tasks, such as drawing a city, floorplan, or landscaping design. The Design Center 2.0 (DC) tool can be used in AutoCAD 2010 and higher. It offers design tools that are similar to those found in Building information modeling (BIM) tools, but in AutoCAD only. AutoCAD DC was released along with the 2010 platform. Subscriptions and other software Subscriptions are used in a variety of ways within AutoCAD to provide access to special features not otherwise available to the user. These include AutoCAD Architecture Premium, AutoCAD Electrical, AutoCAD Expert, AutoCAD Master, AutoCAD Modern, AutoCAD LT, AutoCAD Architectural Desktop, AutoCAD Civil 3D, and AutoCAD Map 3D. The Autodesk Exchange Apps utility can be used to download and install selected Autodesk applications. In 2011, Autodesk added Autodesk MotionBuilder 2011 to the line of Autodesk MotionBuilder products. Autodesk MotionBuilder is designed to create or animate characters, props, backgrounds and environments for use in Autodesk 3ds Max and Autodesk Maya. Available online In July 2006 Autodesk announced that Autodesk 360 web-based software is available free of charge. This product was designed as an online alternative to AutoCAD, allowing users to access and work on their designs from anywhere. However, it is limited in comparison to the desktop version of AutoCAD, and as such the 360 product does not support the more advanced
