

So, I guess Steam updates fixed the launch of the game. ... I just clicked "Play Gas Guzzlers Extreme" (didn't select the 64-bit version) and it worked flawlessly, ... The problem is that I'm using 64-bit Windows 7 and the game is 32-bit, and I don't know if that should be the case or if it's just a bug or if there's a reason it won't work if I want to play with the 32-bit game on 64-bit Windows. Is there any way to get the game to work on 64 bit OS on 32 bit Windows? Any suggestions on how I can solve the problem So, before you start using the "64-bit" way, make sure your GPU is 64-bit. There are several ways to do this.
