* **\$50-\$70:** Photoshop Elements (Figure 5-3) * **\$40-70:** Photoshop Lightroom (Figure 5-4) **Figure 5-3:** Photoshop Elements is a simpler version of Photoshop for those who want to learn Photoshop without going the professional route. **Figure 5-4:** The free version of Photoshop Lightroom is also a great starting point for photographers, because it is the software used to view, manage, and share your photos. Photoshop is the program of choice for much of the graphic design industry as well, because it enables many designers and clients to work together to create the next blockbuster website. Many art schools also use Photoshop for designing student portfolios. Of course, Photoshop is a multipurpose program, and it has many functions beyond image manipulation. We've included two books in this guide that cover Photoshop's

power in art, video, and design creation:
_Photoshop CS5 Master Class: Essential
Techniques and Projects_ (Wiley) and
Photoshop CS5 for Digital Design
(Kensington).

We caught a quick ride to Grand Rapids, and then had a lot of fun exploring the city... and had dinner at a really nice place on Grand River... Well, last night was the wedding! Here's a picture from the evening, Debbie's mom and dad at the front of the hotel and the view from our room. Debbie's mom was in charge of decorating the room and did a great job, using cherries and other dried fruit as decorations. I'm very pleased with the photographs I got, I normally don't like the exterior shots as the city has some nice residential areas. But I thought the one of Debbie and Grant in the hotel lobby was the best shot I've ever had and one of the best shots I've ever taken, I'll be using this... It was just 2 solid weeks of fun and interesting! We really couldn't have asked for anything better and would highly recommend it.

It's worth the drive from around Illinois, and we would go again next year. :) ... ately, intercatalytic alkylation of benzene with ethene to form toluene (and higher polyalkylated products), are catalytic. Such zeolite-catalyzed processes have high conversion and selectivity, but relatively low hydrocarbon space-time yields and are difficult to scale-up. Compared to zeolites, silica-based solid catalysts possess excellent performance for alkylation of benzene and toluene. The lower cost of silica and the scale-up capabilities of silica-based catalysts make them attractive for using large quantities of heat and large quantities of

feedstock. The main challenges for alkylation are the low activity and selectivity of non-porous, supported and/or bound catalysts, as well as the increased catalyst deactivation caused by the high reactant selectivity in the disproportionation step. Attempts to improve the performance of silica-based catalysts have led to the development of a variety of new catalysts for alkylation, including “solid solution” catalysts and layered double hydroxides. Silica-based solid catalysts are state-of-the-art for alkylation reactions, but are not entirely satisfactory. Conventional supported and/or bound silica catalysts have low activity and selectivity to the desired product. To increase the activity and selectivity, the activity and selectivity of the alkylation process can be enhanced by carrying out the process in a fixed or fluidized bed. Fixed bed processes have been used for several decades for the conversion of organic compounds. Fixed bed reactors achieve good operating efficiencies for many hydrocarbon

conversion reactions. This is because the substantial reactor pressure drop associated with gas flow creates a large driving force for the hydrocarbon conversion reaction to proceed. When the conversion reaction is carried out at a high temperature, however, the pressure drop becomes an important factor that limits the reactor performance. The disadvantages of fixed bed reactors include channeling of the reactants and products, as well as fouling. Channeling and fouling of the reactor can significantly lower the conversion and selectivity of the process. In addition to providing good pressure drop, a rapid gaseous/liquid separation can also be achieved using a fluidized bed reactor. In this case, the hydrocarbon conversion reaction is carried out in a fluidized bed. In a fluidized bed reactor, the solid phase of the bed becomes a fluidized state and is suspended in the gas phase by
