Efficient Training and Effective TutoringDoes the activity of the student lead to the development of what might be called a gifted mind? Is it productive for the student to engage in activities that will maximize her or his cognitive ability? Or does the input lead to the production of a person who works well below her or his capabilities? There are three reasons why directing our focus toward learning can lead us to a better understanding of the creative process: 1. Substantive Knowing - We can spend a lot of time learning about the nature of the creative mind without ever attaining a substantive understanding of it. 2. Creative Productivity - Having mastered the art of learning, if not actually producing, as much as possible, what can we expect to gain from training? 3. The Theory of Creative Persistence - Remember the quotation by C.... ... because they have the potential to increase personal creativity. Independence and Creativity. In light of these questions, I have explored to what extent the development of giftedness produces creativity, what the behavioral characteristics of gifted persons look like, and what it means to attain a substantive level of self-knowledge in relationship to the development of giftedness. Bridging Psychology and Creativity. This paper will be presented as follows: The four areas of psychology that relate to giftedness will be examined, including the psychology of intelligence, the psychology of gifted learning, the psychology of temperament, and the psychology of self-knowledge. Practical Applications of Cognitive Psychology to the Child with Giftedness. Then, two creative activities which occur naturally to children will be examined, specifically what it means to read a book and to dream, as well as the kinds of relationships between the creative activities. Educating the Gifted. In the final
